Smart City Management Platform

Group no. - 2A, 2B

The Smart City Management System is an integrated platform designed to improve urban living through technological innovation and interconnectivity. It centralizes essential services, providing residents with easy access to a wide range of professionals like doctors and electricians. Educational institutions, employment opportunities, and healthcare services are seamlessly integrated, enhancing the city's efficiency and the welfare of its inhabitants.

1. User registration & Management

   A gateway for residents to create profiles, manage personal details, and access various city services.

2. Professional Services Directory
